

heavy infrastructure equipments for hiring.

Supernova

Supernova is one of India's leading captive power solutions provider that offers hi-tech diesel and gas gensets to a large and vivid market spectrum. Since 1985, the company, mentored by Mr Samir Mistry, has provided customized high-end captive power solutions that boost productivity, bring in profits and help clients achieve their goals. In this journey to success, Supernova has explored many opportunities and invented many innovative solutions.

One such innovation is its range of eco-friendly Diesel Generator Sets. To protect the environment from hazardous pollutants like noise & gases emitted through diesel engines, Supernova took a major initiative to manufacture its engines under strict parameters. Supernova Engineers have contributed towards environment protection by developing a complete range of silent DG Sets from 2.5 kVA to 2250 kVA. These eco-friendly gensets are powered by

Samir Mistry

world-class diesel engines as Mahindra & Mahindra, Volvo Penta-Sweden and Mitsubishi-Japan, thus assuring quality with sustainable growth.

Unlike traditional gensets, Supernova gensets are placed in acoustic enclosures. These are Ready to Use (RTU), ensuring uniform performance from manufacturing stage to the utility point. To guarantee its credibility, each silent DG Set manufactured at Supernova is type tested, certified and periodically validated by the respected institute - National Aerospace Laboratory, Bangalore. Talking on the success of these environmentally friendly

gensets, Mr. Samir Mistry says, "Since 1st January 2005, Supernova Engineers have manufactured thousands of certified Silent DG Sets and successfully installed all across the country serving various sectors. We have succeeded in providing clean power without causing damage to the environment."

Supernova's clients are an esteemed list of today's largest companies in varied sectors like telecom, infrastructure, malls and multiplexes, hospitals, manufacturing, processing, banking, information technology

and government establishments. Supernova's philosophy is simple - remove the stress from technology. What it strives for is a balance between economy and ecology. Whether you are looking for high

productivity or for improved fuel economy, reliability or low exhaust emissions, Supernova has gensets that meet your requirements. With a long life cycle, each genset offers optimum performance and thus proves to be a great value for money.
